

Frog Street AIM Assessment is an assessment tool designed to support educators in understanding and promoting the growth and development of young children. AIM, which stands for Assessment, Instruction, and Measurement, is a comprehensive assessment system that provides educators with valuable insights into each child's unique strengths, areas for growth, and progress over time.

Frog Street AIM Assessment is grounded in the latest research and best practices in early childhood education, offering a flexible approach to assessment that aligns with state and national standards. Our assessment system covers all domains of development, including cognitive, social-emotional, physical, and language, providing a holistic view of each child's development.

With Frog Street AIM Assessment, educators can easily collect and analyze data to inform their instructional practices, identify individualized learning goals, and track progress over time. Our assessment system includes a variety of tools and resources, including observation checklists, developmental milestones, and progress monitoring tools, allowing educators to tailor their instruction to meet the unique needs of each child.

We have joined the Frog Street AIM Assessment community and take the first step towards empowering young children to reach their full potential!
